ABSTRACT

The report describes a follow-up telephone survey of occupational/educational information of 860 1974 high school graduates from a three-county ten-school district area in mid-Missouri, taken nine months after graduation. In most cases the guidance counselor contacted the graduates, their parents, or reliable relatives or friends and completed the survey instrument. In all, 834 (96.98 percent) of the graduates responded; of these, 50.1 percent were employed, 48.6 percent were continuing their education in a postsecondary institution, 4.5 percent were in the armed forces, 4 percent were homemakers, and 6.3 percent were unemployed or seeking employment. A higher percentage of the males than the females were employed; a higher percentage of the females than the males were continuing their education. Most employed graduates indicated they were trained on the job; only 16 percent stated that their high school trained them for their employment. Of the 108 respondents who had registered with their school placement service, only 7.9 percent indicated that it (or their guidance counselor) helped them find employment (53.3 percent stated they had not been helped to find employment). Twenty-two pages of appendixes include a list of participants in a follow-up workshop, the telephone survey form, the follow-up results of one of the 10 schools surveyed three months after graduation, a list of employers of the 1974 graduates, and a list of postsecondary institutions attended by the graduates. (JR)

## FOREWARD

THE PURPOSE AND VALUE OF FOLLOW-UP STUDIES IS TO PROVIDE US WITH DATA TO EVALUATE PROGRAMS AND DETERMINE IF WE ARE MEETING OUR OBJECTIVES. THIS SYSTEM OF "ACCOUNTABILITY" COULD BE THE ULTIMATE TEST OF WHERE WE ARE AND WHERE WE ARE HEADED.*

The Telephone Follow-Up Survey of the 1974 high school graduates was conducted with the help and cooperation of the following individuals:

Jack Chambers, Principal
Green Ridge High School
Green Ridge, MO 65332

John Williams, Principal
Lincoln High School
Lincoln, MO 65338

Judy Rodgers, Counselor
Smithton High School
Smithton, MO 65350

H. N. Branson, Counselor
Smith-Cotton High School
Sedalia, MO 65301

Nancy Gruenloh, Counselor
Sacred Heart High School
Sedalia, MO 65301

Jay D. Fajen, Counselor
Cole Camp High School
Cole Camp, MO 65325

Donald R. Stratton, Principal
Northwest High School
Hughesville, MO 65334

Bill Gott, Counselor
Warsaw High School
Warsaw, MO 65355

Ordell Sholl, Superintendent
La Monte High School
La Monte, MO 65337

Madelyn Elliot, Counselor
Marshall High School
Marshall, MO 65340

James L. Navara, Director
Career Education
State Fair Community College
Sedalia, MO 65301

Jerald L. Morrison, Specialist
Job Development and Follow-Up
Career Education, SFCC
Sedalia, MO 65301

The activity which is the subject of this report was supported in whole or in part by the U. S. Office of Education, Department of Health, Education and Welfare. However, the opinions expressed herein do not necessarily reflect the position or policy of the U. S. Office of Education, and no official endorsement by the U. S. Office of Education should be inferred.

# CHAPTER I

## INTRODUCTION

In the summer of 1973, State Fair Community College received a grant from the United States Office of Education, funded through Part D, Public Law 90-576, to implement a career education program in a three-county ten school district area in Mid-Missouri. The school districts involved include Sedalia #200, Smithton, Lincoln, Cole Camp, Green Ridge, Marshall, Warsaw, Hughesville, La Monte and Sacred Heart.

One component of the Career Education Project is the Job Development, Placement and Follow-Up component with given responsibilities of follow-up activities of high school graduates from these ten school districts.

In September and October 1973, base-line data was gathered from the 1974 high school seniors as to what they planned to do after they graduated from high school. This data was used to implement the job development and placement portion of the Career Education Project. Results of these surveys may be found in the High School Teachers Survey, January 8, 1974; the High School Counselor Survey, January 23, 1974; and the Area High School Senior Survey Results, January, 1974. In order to implement the follow-up portion of the project, a telephone follow-up survey was taken in January, 1975, nine months after the students had graduated from high school. No attempt has been made at this point to compare the data gathered in September and October, 1973, with the data gathered in January, 1975. Additional information will be published at a later date concerning the correlation between what the students thought they wanted to do after graduation and what they actually did.

## PURPOSE OF THE SURVEY

The primary purpose of the survey was to follow-up the 860 1974 high school graduates from the ten school districts.

The objectives of the follow-up survey were:

(1) To survey the 1974 high school graduates from the ten school districts nine months after graduation.

(2) To analyze, compile and report the results of the follow-up survey to interested parties.

(3) To use the results of the survey for program development, implementation and evaluation.

## CHAPTER II

## DESIGN OF STUDY

### Development of Survey Instrument

During the 1973-74 school year, the Career Education Job Placement Specialist surveyed the participating guidance counselors to determine what job development, placement and follow-up activities were being conducted by the ten participating schools. That survey revealed that only two schools (Smith-Cotton and Marshall) were involved in one-year follow-up studies of their graduates.[1] That fact, along with USOE evaluation guidelines spelling out the necessity of follow-up activities for federally funded Career Education Projects prompted the Job Placement Specialist to research materials from different states--Washington, Missouri, Virginia, Minnesota, Ohio, Arizona, and others to determine what types of follow-up studies of high school graduates had been conducted in the past.

Many of the follow-up studies that have been conducted were for vocational-technical high school graduates and assessed the value of the vocational-technical program in their area or state.

None of the follow-up studies reviewed were designed to follow up all high school graduates one year after graduation. Recently a follow-up study of graduates five years after graduation was conducted by the Missouri State Department of Education.

Since Marshall and Smith-Cotton high schools completed one year follow-up studies of their respective graduates in the last several years, the instruments used by these institutions were considered.

---

[1] High School Counselor Survey, January 23, 1974, Career Education Project, State Fair Community College, Sedalia, Missouri.

This information was presented to the eight participating high school guidance counselors or project designated representatives at a Job Development, Placement and Follow-up Workshop on November 20, 1974. At that workshop, survey objectives were developed by those persons attending the workshop. A list of workshop participants may be found in Appendix A.

The main objective of the survey was to contact, by telephone, each graduate and find out "What they are presently doing." Other objectives included:

1. To locate former graduates and let them know that their alma mater was still interested in them.
2. To determine which students are involved in the world of work.
3. To identify employers of 1974 graduates.
4. To determine which students were involved in post-secondary education programs.
5. To determine which students in post-secondary education were also involved in the world of work.
6. To determine which students obtained employment through their high school guidance counselor and/or the Career Education Project Placement Service.
7. To determine trends and graduate flows to post-secondary institutions.

Questions to obtain information to achieve the above objectives were generated from questions asked in other follow-up studies and redesigned to meet the needs of this survey.

Once the tentative survey instrument was developed, it was discussed individually with each high school representative by the Job Placement Specialist to clarify and refine the instrument. Each school was then asked to approve the instrument and commit themselves to assist in the administration of the survey. A copy of the telephone survey instrument may be found in Appendix B.

## Administration of the Survey Instrument

During the workshop on November 20, 1974, methods of administration were discussed by those present. Using the telephone as an administration device was discussed and deemed to be the appropriate vehicle because:

1. A high response rate was anticipated.
2. By using the telephone, the interviewer could clarify unclear responses.
3. That there was very little anticipated cost differences between mailing the survey as compared to the telephone survey.

After approval of the instrument, a designated individual was given the responsibility of coordinating the administration of the survey. Only one school indicated they did not want to participate in the administration of this survey. Marshall High School had completed a similar telephone follow-up survey in September, 1974, and elected not to participate in this follow-up. See Appendix C for Marshall results.

In seven high schools, the guidance counselor or counselors contacted the graduates and completed the survey instrument. At Cole Camp High School, seniors in a communications class telephoned each graduate and completed the survey instrument. At Smithton High School, work study students and the guidance counselor contacted the graduates and completed the survey.

In each case, the student, his or her parents, or other responsible person gave the information to the interviewer.

In cases where the student was in college or working out of town, the parents were asked for information about their son or daughter. In some cases when the family or student could not be reached, the guidance counselor talked with former instructors to see if they knew what the student was doing or how to contact him or her. In other instances, peers or

brothers and sisters still in high school were contacted and gave information about the former graduate. All respondents were contacted during January, 1975. Once the survey instruments were completed, each school returned their surveys to the Job Placement Specialist for tabulation.

## Population

The population for this survey was the eight hundred sixty 1974 graduates from the ten participating high schools involved with the Career Education Project at State Fair Community College. These districts included Sedalia #200, Sacred Heart, Northwest, La Monte, Green Ridge, and Smithton in Pettis County; Marshall in Saline County; Lincoln, Cole Camp, and Warsaw high schools in Benton.

## Data Analysis

The individual survey instruments were collected from each school's guidance counselor in February, 1975, for tabulation. Tables of frequency distributions were constructed for each item or groups of items. Percentages of responses to total responses were computed in each area.

Separate frequency distributions and percentages were constructed for male and female respondents for most survey questions. Distributions were also calculated to compare graduates from different schools.

In addition, distributions were calculated using the different classifications and combinations of work and school. These distributions were then used to clarify how graduates in one area responded to the survey questions.

In the analysis of the data, very few comparisons between graduates of different schools were made. Analysis or comparisons between schools were not made because of the myriad factors which influence decisions.

## CHAPTER III

## ANALYSIS OF DATA

Of the 860 graduates of the ten school districts, 834 or 96.98 percent were contacted using the telephone technique. Only 26 or 3.02 percent of the graduates could not be contacted by telephone or through a responsible respondent.

Table 1, page 9 shows that of the 860 graduates, 287 or 33.37 percent were employed, 313 or 36.40 percent were enrolled in a four year college, technical school or correspondence school, 4.54 percent were in the military service, 3.95 percent were housewives, 6.28 percent were unemployed and 3.02 percent could not be located.

In analyzing the data, the two largest school systems, Smith-Cotton in Sedalia comprised 39.07 percent of the total population and Marshall High School in Marshall comprised 23.84 percent of the total population. Therefore, 62.91 percent of the population was from the two largest school systems. For comparison purposes, the populations of Smith-Cotton and Marshall have been compared to the population of the eight smaller high schools.

Table II, page10 shows the differences between the two populations. The percent of graduates (34.17 percent) going directly into the world of work is greater in the eight smaller schools than the 32.90 percent in the larger schools. Appendix D lists employers of 1974 graduates.

Of the 319 graduates from the eight smaller schools, 19 or 5.96 percent enlisted in the military service compared to 20 or 3.70 percent of the 541 graduates from Marshall and Sedalia.

| Percentage | 32.90% | | 12.02% | | 39.37% | 3.70 | 4.07 | .18 | 5.54 | 2.22 | | 100% |
| SMALLER SCHOOLS | | | | | | | | | | | | |
| Warsaw | | | | | | | | | | | | |
| Lincoln | | | | | | | | | | | | |
| Cole Camp | | | | | | | | | | | | |
| Green Ridge | | | | | | | | | | | | |
| LaMonte | | | | | | | | | | | | |
| Smithton | | | | | | | | | | | | |
| Sacred Heart | | | | | | | | | | | | |
| Northwest | | | | | | | | | | | | |
| TOTAL | 109 | | 40 | | 100 | 19 | 12 | 1 | 24 | 14 | 319 | 37.09% |
| Percentage | 34.17% | | 12.54% | | 31.35% | 5.96% | 3.96% | .31% | 7.52% | 4.39% | | 100% |

In terms of unemployment, 30 or 5.54 percent of the graduates were unemployed from Marshall and Sedalia as compared with 24 or 7.52 percent from the smaller schools.

Of the respondents that could not be located, 12 were from Sedalia, and 14 were from Warsaw, Green Ridge, Lincoln and Cole Camp. Marshall, La Monte, Smithton, Sacred Heart and Northwest High Schools were able to locate all of their graduates.

In order to analyze the data according to sex, Tables III and IV show that of the 860 graduates, 439 or 51.05 percent were female while 421 or 48.95 percent were males.

Of the 429 females reported in Table III, 128 or 29.16 percent were working full- or part-time, while 173 or 39.41 percent were enrolled in school part-time or full-time. In terms of the females, 6.7 percent were unemployed and seeking work, while 1.2 percent were not seeking work for a total unemployment rate of 7.97 percent.

Eight females or 1.82 percent had enlisted in the Armed Forces. Of these eight, five of these graduated from Warsaw High School one from Lincoln, and two from Smith-Cotton in Sedalia.

Fifteen or 3.42 percent of the female graduates could not be located using this method of follow-up.

Of the 421 males reported in Table IV, 37.77 percent were working full- or part-time, while 140 or 33.25 percent were enrolled in school part-time or full-time. In terms of males, 4.1 percent were unemployed but seeking work, while 1.6 percent were not seeking work for a total unemployment rate or 4.51 percent.

Thirty-one males or 7.36 percent had enlisted in the Armed Forces. Of these thirty-one, ten graduated from Smith-Cotton in Sedalia and eight from Marshall.

*Marshall High School was not included in the January 1975 follow-up of 1974 graduates. However, they did complete telephone follow-up survey of 1974 graduates in September 1974 and the results of this survey reflect the Marshall High School findings from their September survey.

**This student was in a car accident and lost partial vision and is readjusting to life. He was in a junior college prior to the accident.

Eleven or 2.61 percent of the male graduates could not be located using this method.

Table V, page 15 shows students responses to the question "How were you trained for your employment?"

Of the 312 graduates who indicated they were employed or had gainful employment in addition to continuing their education or training, 61.22 percent indicated they were trained on the job. An additional 18.59 percent indicated that they had received some training for their employment from high school and some from their employer. In total, 79.81 percent were trained wholly or partially for their employment on the job.

Table VI, page 16 indicates how graduates from each school indicated they were trained for their employment. Of the respondents, 16.03 percent indicated that their high school trained them for their employment, while 18.59 percent felt their high school or high school related programs trained them for their employment. In total, 34.62 percent were trained in part or wholly by their high school.

Tables VII and VIII, pages 17 and 18, contains the male and female responses to how they were trained for their employment. Of male respondents, 69.88 percent indicated that the training for their employment was received on the job, 17.47 percent indicated they had received their training in high school and on the job, while 10.24 percent responded that they received their training in high school. Only three respondents, or 1.81 percent had received training in an apprenticeship type program.

Of the female respondents, 22.76 percent indicated their high school program provided the training for their employment, while another 50.34 percent showed that on-the-job training provided the training. The females also responded that 20.69 percent had received their training through high school and on-the-job training.

Table IX, page 20 illustrates that 314 students are enrolled in some type of post-secondary institution and also involved in the world of work. Of these 314, 159 or 50.64 percent are enrolled in a college program with 136 of these going to school full-time only. Seventeen respondents were going to college full-time but also working part-time.

The respondents also indicated that 137 or 43.63 percent were enrolled in a junior college program. Of these 137 respondents, 66 were in school full-time with no outside employment 45 were enrolled in school full-time and working part-time, and only one was enrolled in school full-time with full-time employment. Several individuals indicated they were working part-time and going to school part-time.

In addition to the above, the individuals were enrolled full-time in a technical institution and one individual enrolled in a Job Corps program.

In total, 213 or 67.84 percent of the 314 students surveyed were going to school full-time, while another 64 or 20.38 percent were going to school full-time and working part-time. Appendix E lists the post-secondary institutions being attended by the 1974 graduates.

In Tables X and XI, pages 21 and 22 those students attending post-secondary institutions are listed in terms of male and female responses. A greater percentage of males are working part-time while going to school than females.

Of the 860 graduates, 418 were enrolled in some type of post secondary education. Table XII, page 23 shows that of these 418, 249 or 59.57 percent were enrolled in a four year college. About one-third or 34.69 percent or 145 of the 418 were enrolled in a community or junior college. Appendix E provides a list of post-secondary institutions attended by the 1974 graduates and their declared majors.

Two graduates were enrolled in special types of post secondary institutions. These two included a correspondence course and enrollment in a job corps program.

Tables XIII and XIV, pages 25 and 26 illustrate the responses for males and females, as to their enrollment in post secondary institutions.

These tables show that 218 females compared to 200 males are enrolled in post secondary programs. The percentages of males and females attending four year institutions are almost identical. Of the females, 60.09 percent are attending four year institutions compared to 59.00 percent for males. More males, 35.50 percent compared to 33.95 percent females were attending junior or community colleges. Most schools had about the same number of graduates attending two year colleges as four year colleges. Lincoln and Marshall had a high proportion attending four year colleges.

In response to the question, "Did you locate employment through your guidance counselor and/or the Career Education Job Placement Service?" only 7.80 percent indicated they had utilized these services. Table XV, page 27 shows that over half, or 53.35 percent of the 629 students reported that they had not located employment through these services. Of the total respondents, 37.31 percent did not respond to this question.

Two schools, La Monte and Sacred Heart, showed almost opposite responses. At La Monte, 73.50 percent of the graduates indicated that they did locate employment through these services; while at Sacred Heart, 85.70 percent indicated that they did not locate employment through the placement service or their guidance counselor. Only 7 or 2.2 percent of the respondents from Smith-Cotton High School in Sedalia responded that they had utilized these services. Two hundred or 61.7 percent answered "no" to this question, while another 36.1 percent did not respond.

Tables XVI and XVII isolate the male and female respondents to the preceding question. More female respondents (30) than male respondents (20) indicated that their counselor or placement service helped them locate employment. In looking at individual high schools, only one male graduate from Warsaw, La Monte and Smith-Cotton indicated any assistance from the placement service. No student in Lincoln or Green Ridge felt the guidance counselor or the placement service had helped him.

Tables XVIII, XIX, and XX show how graduates used the guidance counselor or placement service in relationship to the different classifications of work and/or school.

In response to the last question, "Do you plan to enroll in further educational or training programs?" Table XXI shows that 25.1 percent of the respondents want to enroll in further education or training. Some graduates, 6.3 percent, are still undecided about enrolling in further education. Tables XXII and XXIII show the different responses according to sex to the above item. More women than men were undecided as to their future educational or training plans, while more men had decided to further their education or training.

# CHAPTER IV

## SUMMARY AND RECOMMENDATION

### SUMMARY

In January 1975, a telephone follow-up study was conducted with eight hundred sixty 1974 high school graduates of the ten school districts involved with the Career Education Project at State Fair Community College.

Of these graduates, 96.98 percent were contacted by telephone and responded to the survey instrument.

Of the respondents, 50.1 percent are involved with the world of work, 48.61 percent are continuing their education in a post-secondary education or training facility, 4.54 percent have enlisted in the armed forces, 3.95 percent are engaged in homemaking, 6.28 percent are unemployed or not seeking work and 3.02 percent could not be located.

The survey also revealed that a higher percentage of the males were involved in the world of work than females, and that a higher percentage of females were enrolled in post-secondary education or training.

A comparison of large school versus small school graduates indicated that a higher percentage of graduates from the large schools enrolled in further education and that more of the small school graduates enrolled in the world of work.

The majority of the graduates who were engaged in the world of work indicated that they had been trained on the job. Only 16.03 percent indicated that their high school had trained them for their employment.

In reviewing the list of employers of 1974 graduates (Appendix D) and the list of post-secondary institutions attended (Appendix E), it is evident that the majority of the graduates remain in Missouri and that most

of the graduates do not leave the immediate area within the first six months of graduation.

More than half of the graduates, 59.57 percent of those enrolled in post-secondary institutions, are enrolled in four year institutions, 34.69 percent are enrolled in two year institutions and only 5.26 percent of the graduates enrolled in technical training facilities. Since this is the first follow-up of graduates in the area, no conclusions can be drawn as to graduate trends to or away from four year institutions; however, guidance counselors have indicated that more students are enrolling in the less expensive and closer to home institutions. We did note, however, that the larger the high school, the greater was the probability that the graduates would enroll in four year colleges and greater distances from their home town.

Since this survey was initiated to encourage the participating high schools to follow up their graduates through the Career Education Job Placement component and because the 1973-74 school year was the first to have placement services available to all graduating seniors, one question was included in the survey to assess the value and establish the accountability of the project's placement service. During the 1973-74 school year, 108 students registered with the placement service and indicated they wanted assistance in locating employment. Fifty graduates or 7.93 percent indicated that their guidance counselor and/or the placement service had helped them locate employment. However, 38.8 percent of the graduates did not respond to the question and 53.27 percent stated that they had NOT been helped to locate employment. This question on the survey did establish the accountability of the placement service and indicates that if placement services are to be extended, more graduates should be helped.

## Recommendations

Having completed this survey, several recommendations can be made to improve future follow-up activities. These recommendations include:

(1) Additional yearly follow-up studies should be conducted to determine what happens to graduates.

(2) Attempts should be made to find out how graduates feel about curriculum, facilities, and faculty.

(3) Additional follow-up studies should be conducted to follow-up high school students who have dropped out of school.

Placement services to help students locate employment are new to the high school students but they are a real measure of the accountability of the school, its curriculum and programs. Now that we know the past and can compare it to the present, we should begin to develop new directions for our graduates to better meet their needs and improve our society.

SUMMARY:

Of the 205 in the 1974 graduating class 90 students (46 boys; 44 girls) or 43.90% of the class are continuing their formal education in 4 year colleges; 7 students (2 boys; 5 girls) or 3.41% are continuing their education in Junior Colleges; 6 students (3 boys; 3 girls) or 2.92% are continuing their formal education in technical schools. Thus a total of 103 students (51 boys; 52 girls) or 50.23% are continuing their formal education.

A total of 75 (47 boys; 28 girls) or 36.62% of the 205 students graduating are employed.

Eight of the young men or 3.90% of the class are enlisted in the Armed Forces.

Ten of the young women or 4.87% of the class are married and consider this time-honored institution their career.

Nine students (1 boy; 8 girls) or 4.38% are unemployed.
